### Projects

#### Computer Manager Ltd. (manufacturer): [Live Link](#)

- Developed attractive UI with ReactJS, modern css framework (tailwindcss) & component libraries. Rest API's & database implemented with NodeJS, ExpressJS & MongoDB.
- **App-Features:** authenticated firebase login (email-password & social both), ordered list, dynamic review system implemented on Dashboard (user role) Include admin authorization system, add & manage dynamic services/products & also admin can manage orders & user-list (admin role), admin & user routes are isolated each to other, payment method (stripe), stored users & admins foot-print on database, secret API, multi themed UI.
- **Source Code** : [Client GitHub](#), [Server GitHub](#).

#### Molinarid Perfumer (warehouse): [Live Link](#)

- Eye catchy UI made by ReactJS, vanilla css & external utility libraries & Server communication implemented by, node, express and mongo as database. For reducing code & increasing performance used interceptor & custom hooks. For easy to understand the code base, relevant file/folder naming convention.
- **Web-Features:** JWT modern authentication Include firebase login system, secured API, instance update quantity by input, one click quantity reduce, manage inventory, add products/service dynamically, user's added items are isolated & person can managed them easily, all important interactivities stored in database.
- **Source Code** : [Client GitHub](#), [Server GitHub](#).

#### Jade Mills (Independent Service Provider): [Live Link](#)

- Great user interface with ReactJS, bootstrap5, external component libraries, services are shown with standard layout, annoying long description's inconsistent UI structure handled by read more button.
- **Web-Features:** firebase authentication login system, useful info at blog section, checkout route, loading less web application.
- **Source Code** : [GitHub](#).
